

{{System name}} architecture board

Kaku: a WezTerm core, rewired for AI coding

WORKSPACE VIEW · 2026-07

Defaults ship on day one, Lua customization stays, and the AI engine is the fork's real addition.

01 · PLATFORM SURFACE

WHO KAKU SERVES

AI coding sessions in-terminal assistant ai_chat_engine · ai_tools	Daily terminal work panes · tabs · workspaces local, ssh, mux domains	macOS desktop theme follows the system notarized DMG app	Shell suite curated zsh plugins prompt · diff · navigation
---	--	---	---

02 · GUI SHELL · KAKU-GUI

GPU FRONT END

Window frontend frontend.rs · macos events · commands	GPU glyph pipeline glyphcache · shaders custom glyphs	Input map inputmap.rs · commands.rs keys to actions	AI chat engine ai_client · conversations auth · state · remote
--	--	--	---

03 · TERMINAL CORE

INHERITED FROM WEZTERM · TRIMMED

Multiplexer pane · tab · domain mux crate	PTY layer child shell processes pty crate	Escape parsing vtparse · escape-parser bytes to actions	Cell model surface · cell · termwiz grid state · attributes
--	--	--	--

04 · MAIN AXIS · INPUT TO PIXELS

THE PATH EVERY KEYSTROKE TAKES

AUX · AI PATH: PROMPT → AI_CHAT_ENGINE → AI_CLIENT → PROVIDER API

05 · CONTROL PLANE & GOVERNANCE

HOW THE FORK STAYS MAINTAINABLE

CONFIG	THEME	DISTRIBUTION	UPSTREAM
Lua end to end config · lua-api-crates config_tui · doctor	Follows macOS kaku_theme · color-funcs dark and light tuned	Notarized DMG GitHub releases brew tw93/tap/kakuku	WezTerm fork core crates tracked 40% smaller binary

LEGEND

Focal · the fork's addition Band · peers share one shell Main axis Crate-level detail lives in the workspace docs; this board carries the spine.

One focal per board: the AI chat engine, the piece this fork actually adds.
Bands group peers behind thin dividers, governance sits in a table shell, and
the only brand-colored line on the page is the main axis.
